

# Dräger SPC 4400 / SPC 4800 / SPC 4900

## Splash Tight Suit

---

Light and comfortable to wear: Dräger SPC 4X00 liquid-tight splash suits offer reliable protection against the finest particles and powders, many concentrated inorganic acids and alkaline solutions, and are also resistant to a wide variety of organic liquid chemicals. They are CE-certified and classified as type 3, 4, 5 and 6.

# Dräger SPC 4400 / SPC 4800 / SPC 4900

## Dräger face cuff

Ergonomically shaped for maximum comfort

## Wide visor

Optimal vision when wearing a full-face mask

## Opening in the back

High protection against hazards from the front

## Permanently integrated socks

Socks with cuffs made from the suit material for added protection

## ESD design

Special sock design for working in explosion hazard zones (optional)

## Backpack

Optimal comfort for carrying the interior compressed air breathing apparatus

# Benefits

## Reliable protection, yet light and comfortable

If you are at risk of coming into contact with solid and/or liquid chemicals while working, only a full-body protective suit can offer you optimal protection. To protect your skin from harmful substances, hazmat suits like the SPC 4X00 series are the right choice. They are made from coated CPM and CLF material and offer full protection against the finest particles and powders. Plus, the suits protect against many concentrated inorganic acids/alkaline solutions, and are highly resistant to a wide variety of organic chemicals in liquid form. They are CE-certified and classified as chemical protective suits, type 3, 4, 5 and 6. In addition, we test permeation data far beyond the standard. Our CPM and CLF material are developed and manufactured in Germany, thus ensuring reliable supply capability.

Common areas of application include decontamination tasks, maintenance, inspection or cleaning, decanting and filling, handling oil and many others.

## No matter what your job requires, these suits offer suitable protection for any application

### **SPC 4400 overall with hood:**

The coverall has a front opening, hood, elastic leg and arm ends. It can be used individually with different respiratory protection products, gloves and boots.

### **SPC 4800 protective suit with facial cuff:**

This protective suit variant with face cuff is used in combination with full face mask. In addition, the suit is preconfigured with gloves and integrated socks.

### **SPC 4900 full-body protective suit with visor:**

The full protection suit is used with an internal SCBA inside the suit and is pre-configured with integrated gloves and socks.

## SPC 4400: The ideal protective suit for simple tasks.

The one-piece overalls are available in two different materials (CPM and CLF). The ends of the hood, sleeves and legs are fitted with an elastic band and a thumb loop. The zip runs along the centre of the front and, in the version made from CPM, it is fitted with two cover panels, including adhesive strips. The CLF version is fitted with hook-and-loop fasteners instead of tape, enabling limited use. There is a cover panel in the throat area as well, for safely sealing off the suit. The overalls are designed for use with e.g. single-use dust mask, half- or full-face mask, compressed air breathing apparatus, powered air purifying respirator or compressed airline devices.

## SPC 4800: Advanced protection

What sets the Dräger SPC 4800 apart is its unique face cuff which is also built into the gas-tight Dräger CPS. It is soft, flexible and exceptionally easy to handle and wear. The one-piece overalls with liquid-tight bonded seams are equipped with permanently integrated gloves, socks with cuffs as well as a zip on the back. This makes it unnecessary to waste time taping up the suit. It is designed for use with full-face masks, e.g. in combination with a filter, a compressed air breathing apparatus, an air purifying respirator or a compressed air hose device.

# Benefits

## **SPC 4900: Total protection for workers and their equipment**

Like the SPC 4800, the SPC 4900 features permanently integrated gloves, socks and a back entry. The suit is used with a full face mask in conjunction with a SCBA. The SPC 4900 has an extra-large hood with visor and a backpack for optimal protection of the SCBA. I.e. the SCBA is worn under the suit. This way, the complete equipment remains protected in case of contamination.
